

Project Title: YWCA EncorePlus I

Amount: \$77,010

Project Description:

The project provides breast cancer education and support services to medically underserved women. Education about breast cancer and breast health is given individually to 3,000 target women. Major support services are helping women get repeat yearly mammograms and clinical breast exams for early cancer detection, helping women who have symptoms that could be breast cancer obtain optimum treatment and medical follow-along, and helping women diagnosed with breast cancer access state-of-the-art treatment without delay. Service methods include individual yearly screening reminder, referral to outside sources for transportation and financial help and to reduced cost and free medical providers, plus other helps. EncorePlus is an innovative and highly successful program. It would make an excellent model for replication.
